## Discovery Forensics

Forensic data discovery is a highly technical field, requiring trained experts with specialized knowledge about how to recover deleted files, preserve metadata, and maintain proper chain of custody. With experience in many criminal and white-collar cases involving both state and federal regulators, SiteLogistix can help you navigate this highly technical process. Our discovery forensic experts are trained in various preservation and collection methods that span almost every data store, including Mac and Mobile operating systems.

## Professional Services

### Consulting

To make sure your case goes smoothly, SiteLogistix provides project management services, collection technology consulting, preservation and legal hold consulting, IT infrastructure analysis, data mapping, and data security assessments.

***THE RIGHT LEGAL  
PROFESSIONALS AT  
THE RIGHT TIME.***

### Expert Testimony

Our experts stand behind their process and have experience presenting their methodology in court.

### Data Preservation and Hosting

Our collection methods ensure proper chain of custody and preservation of data throughout the forensics process. Collected data can then be loaded into our secure and redundant private cloud data center powered by Rational Review.

### Forensic Search, Analysis, and Data Recovery

Our experts can help you quickly explore system files to identify any and only potential evidence, analyze data in place for a particular matter, and even recover deleted or hidden files and files from failed hard drives.

### Data Collection and Processing

The SiteLogistix Forensics team uses the most advanced tools and processes to ensure that data collection is complete and defensible. We can collect from a variety of data sources, including mobile devices (phones, tablets), social media sites and other websites, PCs with any operating system, network file shares, etc. to gather live data, legacy data, structured data, and unstructured content. Our services include full disk or targeted collections, remote or on-site collections, and encrypted file analysis and password cracking.

## ***IF IT'S IN THE DATA, WE'LL HUNT IT DOWN***
