

 Rational Review

Build a Better Case

Load, search, cull, review, and produce data

Our proprietary, cloud-optimized eDiscovery platform

Rational Review combines cutting-edge analytics, an intuitive interface and simple pricing to help you quickly uncover and review key evidence and build a better case.

Key Features

Matter Dashboard

View a status summary of each matter, including key metrics and activity history.

Predictive Coding

Use supervised machine-learning tools to perform predictive coding for automated document review.

Email Threading

View emails organized by thread with integrated mail tampered detection.

Duplicate and Near Duplicate Detection

Only look at one copy of any document with customizable sensitivity.

Key Features

Granular Security and Data Segregation

Allow multiple parties to have various levels of access to the repository and its data.

Intuitive Search

Basic to complex search to cull data with statistical sampling.

Clustering

Use unsupervised learning to uncover similarities between documents based on topic.

Reporting and Automation

Use workflows, visualization, and reports to monitor process, progress, and productivity.

Key Features

Review and Coding

View, tag, and code documents manually using a sophisticated yet user-friendly review pane.

Integration With Rational Governance

Load data from your Rational Governance instance seamlessly.

Key Benefits

Scalable Infrastructure

Rest assured in Rational Review's reliability and robust processing capabilities, powered by your choice of leading cloud service providers.

Self Administration

Every function of Rational Review is designed to be completely self-service, including loading, production, and settings for security and permissions.

Data Security

To mitigate risk and keep data secure and accessible, Rational hosts client data with only the most secure cloud environments.

Great User Experience

Rational Review combines cutting-edge functionality and an intuitive user interface designed for speed, with rapid search results, analytics, and document navigation.

Time & Cost Savings

Use our advanced analytics tool including predictive coding to save time and costs in delivering to strict deadlines.

Proprietary Software

Rational Review is built in-house, so you never pay marked-up fees, and you can have direct input into customizations.

Service that's just as outstanding as our software

Professional Services

We've been specialists in eDiscovery for over 15 years, so our support personnel are industry veterans. And, with our global presence, Rational's client services team has ample experience handling multijurisdictional matters. Rational also has a team of data scientists to provide clients more personal assistance with their predictive coding needs.

eDiscovery Managed Services

Rational Enterprise offers Managed Services to provide law firms and corporations cost predictability and efficiency throughout the discovery process.

Transparent and Predictable Pricing

Rational eliminates uncertainty and unanticipated costs from eDiscovery. Our eDiscovery pricing is simple and predictable, with a fixed-fee schedule for unlimited users and matters, tiered based on the amount of data.

Use Cases

Litigation Review & Production

When a litigation arises, Rational Review facilitates the easy setup of a case, allowing you to take a more hands-on approach to your matter. Documents can be loaded via a simple, but powerful importing tool, which accepts almost all types of data, including natives, text, images, and produced documents with load files. Email Threading, de-duplication, and near-duplicate detection are automatically run upon upload to the platform. Automatically populated dashboards provide immediate insights into key metrics across the site, allowing early case assessment and review oversight.

Intuitive search, advanced tools for both supervised and unsupervised learning, and customizable review features will give confidence that the review team has found all relevant materials. And when you're ready to turn over documents, our production capabilities include flexible Bates stamping, slip sheeting, configurable redactions, and load file creation in accordance with requirements.

Investigations

Investigations can often involve quick turnaround times, with added pressure for legal teams to interrogate data efficiently and cost-effectively, while using defensible procedures. With Rational Review, a corporate legal department can self-administer many tasks, including upload of potentially relevant data; email Threading, de-duplication, and near-duplicate detection are automatically run upon upload so that extraneous data is set aside and correspondence is organized logically. Locating key documents is then quick and simple using RR's powerful search and machine learning tools.

M&A Deal Room

Rational review is ideally suited for Mergers and Acquisitions deal room review and collaboration. Documents may be uploaded into the review platform, where rich security, control, and auditing are enabled. Security may be set all the way to the document level and all user actions may be controlled and audited.
